EDUCATION

Bachelor of Science in Computer Science (Honours Program) York University, Toronto, Canada Relevant Coursework: Data Structures, Databases, Software Design, AI, Applied Cryptography, Operating Systems, Networking	<i>Expected Graduation: October 2026</i>
Certificate in Cybersecurity Cornell University (Online)	November 2024 - March 2025

TECHNICAL SKILLS

Languages/Frameworks: Java, Python, C++, JavaScript, TypeScript, SQL, React, Node.js, Spring Boot, FastAPI, JUnit, Microservices
Tools: Git, AWS CLI (LocalStack), Linux, Windows, Docker, Postman, Excel, Figma, Microsoft Office365
Practices: Agile/Scrum, debugging, code review, documentation
Languages Spoken: English (Fluent), Vietnamese (Native), French (B2)

EXPERIENCE

Full-Stack Developer Internship <i>NGSC Vietnam, Ho Chi Minh City, Vietnam</i>	Java, SQL, Spring Boot, REST API, TypeScript, Microservices <i>March 2025 - September 2025</i>
- Developed and maintained 10+ REST API endpoints using Java Spring Boot microservices for a financial platform. - Optimized database operations involving 100M+ banking records through SQL indexing and query improvements. - Created and executed 100+ Postman API tests, documented 20+ software defects, and improved reliability with JUnit testing achieving 80%+ coverage. - Collaborated with backend and frontend teams to integrate services while following secure coding practices and software development standards.	
TeddyBank – ElleHacks 2026 (Hackathon) <i>Team Project</i>	React, MongoDB, Node.js, Python, Arduino <i>1st Prize – WealthSimple Challenge</i>
- Developed a React dashboard for children and parents to manage tasks, track earnings, and visualize financial activities. - Designed MongoDB data pipelines and integrated AI-generated narratives using Google Gemini API. - Collaborated in a 48-hour hackathon to build an AI-powered financial companion, winning 1st Prize – Wealth-simple Challenge.	

PROJECTS

EV Marketplace Platform <i>Team Project</i>	React, Spring Boot, PostgreSQL, Docker
- Developed a full-stack electric vehicle marketplace using React and Spring Boot, supporting vehicle browsing, reviews, test-drive booking, and interactive vehicle visualization. - Designed REST APIs and PostgreSQL database schemas for vehicle management, user reviews, and appointment scheduling. - Implemented responsive UI components with Tailwind CSS and integrated backend services using structured service-layer architecture.	
AI Phishing Email Detection System <i>Personal Project</i>	Python, scikit-learn, TF-IDF, Logistic Regression
- Built an end-to-end phishing email classifier using TF-IDF and Logistic Regression on 30k+ real-world emails. - Achieved 98% accuracy and evaluated performance using precision, recall, confusion matrix, and F1-score. - Optimized detection reliability by reducing false positives and missed phishing attempts.
